Teacher Workshop on Assessment: Using Exit Slips as a Formative Assessment Tool in Social Sciences

Prepared by: Thwaha Murshid, Murshid Rahman, Vishnu Prasad, Ramyasri Munjam, Unais P.

Duration	**6 hrs/ 1 Day**
Target Audience	**Social Science teachers of varied experience range in the profession at the high school level.Teachers with mixed experience in formative assessment practices.**
School Type	**Government High Schools in Puducherry**

Objectives

1. To understand the purpose and importance of formative assessment in social science.
2. To identify different types of exit slips based on each discipline in social science.
3. How to design age-appropriate exit slips.
4. To understand when to use exit slips based on the content and students' understanding.

Learning Outcomes

1. Teachers will be able to articulate the importance of exit slips as a tool for formative assessment, identify different types of exit slips, and match them to social science competencies.
2. Teachers will be able to create high-quality exit slips in various disciplines of social science aligned to learning outcomes and contextual needs.
3. Teachers will be able to analyse student responses and plan the upcoming lessons informed by responses.
4. Teachers will be able to provide constructive feedback using clear rubrics within subject-group teachers and

Session 1 (09:00 am to 10:30 am)

- **Objective:** To understand why formative assessment is continued, and learner-centred, and understand the concept and purpose of exit slips as a formative assessment tool.
- **Learning Outcome:**
  Explain why formative assessment is a continuous, learner-centered process that supports ongoing learning.
  Describe the concept and the process of exit slips as a formative assessment tool.
  Apply exit slips appropriately to check student understanding at the end of the lesson.

Icebreaker- Pass the ball: Quick Introductions

Duration: 15-20 minutes

- Use a soft ball and throw it at a random person in the session. The person who gets the softball will introduce themselves and share an assessment moment that changed the way they look at students' learning

Discussion on the Continuous and Comprehensive Evaluation (CCE)

Duration: 30 Minutes

- Ask teachers the following questions to prompt answers and use them as discussion pointers.
  - How do you feel about implementing CCE in your classroom? Is it beneficial for students' learning?
  - What tools do you use for CCE in your classroom?
  - What challenges do you face while implementing CCE?

Introduction to Formative Assessment and Tools

Duration: 45 Minutes

- The primary purpose of assessment will indeed be for learning; it will help the teacher and student, and the entire schooling system, continuously revise teaching-learning processes to optimize learning and development for all students. These will be the underlying principles for assessment at all levels of education. (NEP 2020, Para 4.34)
- NCF 2023 suggests a shift from traditional summative rote-based assessment models and a new approach
  - **Assessment of Learning**: Measurement of achievement of student learning outcomes
  - **Assessment as Learning**: evidence of student learning gathered by the Teacher that provides inputs to guide teaching-learning processes. Assessment, when designed meaningfully, can be used as a powerful tool that contributes to and supports better student learning and teaching practices. Teachers who have a good

sense of where students in class do well and where they struggle can take more informed decisions about their pedagogical practices.
    - **Assessment for Learning**: Assessment as a tool for self-reflection and instruction, hence working as constructive feedback.
- **NCF 2023** recommends the usage of formative assessment as a tool for learning and giving students agency of their learning in middle and high school stages. Assessments should prompt teachers to make informed decisions about pedagogical practices and strategies in classrooms.
- Teachers must have the pedagogic autonomy to plan and organise content, decide the sequence and methods of teaching students as the situation demands, along with **ways of assessing their learning**. (NCF 2023, Part E, Pp560)

Closure Prompt: "How can I imagine this suggestion in my classroom?"

Tea Break **10 Minutes**

Session 2 (10:45 am to 12:15 pm)

- **Objective:** To create a reflective space for teachers to analyse their classroom practices, discussing the real classroom challenges and strengths of applying exit slips as a tool for formative
- **Learning Outcome :**
    - Teachers will be able to reflect on their classroom experiences of conducting formative assessments.
    - Identifying key challenges they face in implementing exit slips as a formative assessment tool
    - Share practical strategies from the classroom experiences for addressing common challenges

Activity: Agree-Disagree Line
Duration: 15 Minutes

Say statements one by one and ask participants to stand on a spectrum from
Agree - Not Sure - Disagree.

Statements:

- Sometimes the tools we use in class like quick questions , reflections, or small check-in's are actually similar to exit slips.
- The tools we use often depend on time, classroom energy, and what works for our students on that day.
- Simple tools often give more honest responses from students than long activities
- Whether it's an exit slip or any other tool, what matters most is how we use student's responses to suppose and improve learning.

Activity: Discussion
Duration: 20 Minutes
Choose one side and justify your stance

1. Exit slips fail to address multiple needs in a classroom.
2. A well designed exit slip is more effective than homework.

Session plan and activities

Introduction	The facilitator will introduce the objective of the session as creating an atmosphere of open discussion among teachers.	5 minutes
Experience circle	● Each teacher will share their classroom experience of Exit slips, even if they did not use the term "exit slip," they might use similar strategies for assessing children.	20 minutes
Group discussion	● Teachers will start discussing common challenges and strengths, and how to overcome them. ○ Questions could be discussed around: How to choose appropriate exit slips for diverse learners?	20 minutes
Strategy Exchange	● Teachers will share and discuss practical strategies and techniques of exit slips, especially in social studies.	15 minutes
Reflection of the session	● Reflection on the session and feedback	10 minutes

Lunch Break **1 Hour**

Session 3 (01:15 pm to 02:45 pm)

Duration: 1.30 Hours

Demonstration on how the five exit slips could be used in the four disciplines of social science.

In each discipline (Political Science, Geography, Economics, History), one concept will be selected, and how the five models of Exit slips (presented in the previous session) could be used while teaching each concept will be demonstrated.

- **Objective:** To show teachers how different exit slip techniques can be meaningfully used across the four social science subjects by demonstrating them through real classroom concepts.
- **Learning Outcome:** By the end of session 3, teachers will be able to know how to prepare exit slips based on their discipline and able to understand how to design appropriate exit slips. And how they exist slips differently in each discipline.

Introduction	Briefing the five models of exit slips and briefs on the benefits of using it in the disciplines of Social Science.	10 Minutes
Demonstration of the use of the exit slip in each discipline	1. Model of Exit Slip: Dipstick Discipline: Political Science Concept: Fundamental rights Exit Slip Prompt: "Rate your understanding of *Fundamental Rights*" on a scale of 1-5 and write one sentence explaining why you chose that number." 2. Model of Exit Slip: Muddiest Point Strategy Discipline: Geography Concept: Climate vs Weather Exit slip Prompt: "What part of today's lesson on Climate vs Weather is still unclear for you? Write in one or two sentences." 3. Model of Exit Slip: Application Scenario Slip	30 Minutes

	Discipline: Economics Concept: Supply and Demand Exit slip Prompt: “imagine the price of onions suddenly doubles in your city. Using what we learned today, explain in 2-3 sentences: Why this might happen, and how it might affect buyers and sellers.” 4. Model of Exit Slip: Decision/Solution Slip Discipline: Political Science. Concept: Local Governance / Community Decision Making Exit slip Prompt: “Your Panchayat has 5,00,000. You can only choose one priority A) Repairing the school building B) Building streetlights C) Improving village roads Write your decision and give two reasons to justify your choice.” 5. Model of Exit Slip: Cause-Effect Chain Discipline: History Concept: Causes of the Revolt of 1857 Exit slip Prompt: “Create a cause-and-effect chain showing how one major cause contributed to the revolt of 1857.”	
Group activity- Creating Exit slips in accordance with selected concepts from the disciplines.	Retain the subject-wise groups (History, Political Science, Geography, and Economics). Each group will be given 2-3 concepts from their respective discipline and they will select one, and design appropriate exit slips. A) Political Science: Fundamental Rights and Duties, Types of Government, Government at the local level. B) Geography: Climate, Landforms, Natural Vegetation.	45 Minutes

	C) Economics: Demand & Supply, Sectors of Indian Economy, Poverty and Development Indicators. D) History: National Movement, Industrial revolution, Mughal period	

Q&A Time **15 Minutes**

Tea Break **15 Minutes**

Session 4 (03:00 pm to 04:30 pm)

Objective

- To give teachers hands-on practice in creating exit slips by letting them design their own slips, based on their classroom needs along with peer suggestions and collaboration.

Learning outcomes

- Teachers will be able to design clear and meaningful exit slips for their discipline independently and will understand how to refine them based on feedback and classroom needs.
- Teachers will be able to refine the exit slips based on constructive feedback from peers and adjust them to classroom needs.

Group Activity: Presentation and Discussion

Duration: 1:30 hours (10 Mins for each group, followed by 10 minutes discussion)

- Teachers will be divided into 4 groups, each group will be assigned to each discipline, and they will be given a bunch of concepts from the respective discipline. They will select one concept and design concept-appropriate exit slips.
- They will present their slips and it will be followed by a discussion and reflective question in the end “What will I do to integrate the feedback I got into my exit slips?”

Wrap up **10 Minutes**

Appendix I

5 Techniques for Exit Slips

1. **Dipstick**

A quick and simple tool where students produce a short response, like one sentence or a small sketch, to show immediate understanding of concepts taught in the class

2. **The muddiest point strategy**

The students will write the most confusing part from their class, including questions and doubts about the same part. This will help teachers with the misconception, and it will help them to plan for the next class.

3. **Application scenario slip**

Students will respond to a real-life or hypothetical scenario and will try to apply what they studied in class with the scenario. This will help the students to explore the nuanced sides of the same topics.

4. **Cause effect Chain**

Students will write a cause and effect related to the lesson or they will find causes for the given effect. This will also help in reasoning and to check the conceptual understanding they made.

5. **Decision or Solution slips**

Students will make decisions or find solutions to a given real world problem or hypothetical problem, giving justification for their solutions. This exit slip could be considered a high order thinking practice.
